

Nashville Health Care Council

by eDoc4U | Mar 27, 2012

NASHVILLE - Nashville-based eDoc4u has released an enhanced version of its Advanced System for Care Management (ASCM). The ASCM contains powerful new techniques and services for Health Coaches to manage and coordinate care and, also, enhances capabilities for both patients/employees and for administrators responsible for reporting population health analytics.

ASCM is a part of eDoc4u's proprietary Software as a Service (SaaS) platform that integrates several categories of health data, including: health risk assessments (HRA), demographics, biometric screenings and insurance claims. Further integrations of data from leading electronic health records (EHR) vendors are currently under development.

The integrated data is passed through evidence-based algorithms to identify high risk patients and provide proactive programs for preventive care and disease management. ASCM focuses on secure Internet access to care, health promotion and education to strengthen healthcare accessibility and quality management by health coaches and clinicians. In addition, ASCM enables hospitals and clinics to qualify for incentives from government and private-sector payers for achieving Meaningful Use and Patient Centered Medical Home standards.

A new Care Management Dashboard displays comprehensive patient/employee-specific information to facilitate a robust conversation between the Health Coach and patient/employee to manage and coordinate his/her care. The Care Management Dashboard contains:

- o Quick access to the patient/employee's Health Risk Assessment and his/her Dashboard
- o "Message Center" allowing for secure, direct messaging between Health Coach and patient/employee
- o A status report on compliance to patient/employee-specific disease prevention

recommendations and educational lessons/articles.

Richard Smith, President of eDoc4u, said "The new Care Management Dashboard will immediately help Health Coaches who are tasked with managing the quality of care across diverse patient/employee populations. Using the Care Management Dashboard, health coaches now can access all needed information on a simple, easily navigable screen."

For information about The Advanced System for Care Management or about eDoc4u's full range of services, please contact Kris Thurman, Vice President, Business Development, at 615-279-3423 or visit www.edoc4u.com.

About eDoc4u Division, ConduIT Corporation

eDoc4u is a division of ConduIT Corporation based in Nashville, Tennessee. eDoc4u provides integrated preventive care web services to millions of members through benefit plans, health plans, providers and pharmacy benefit managers. Its products empower patients and employees to optimize health by improving the quality and delivery of preventive care through "high tech, high touch" medical web strategies. The eDoc4u team includes Board-certified internal medicine physicians who believe that a focus on research-proven standards of preventive medicine is the best way to improve the health of individual patients, employer groups and communities.
